

L^AT_EX Class for the *Association for Computing Machinery**

Boris Veytsman[†]

2024/12/07, v2.11

Abstract

This package provides a class for typesetting publications of the Association for Computing Machinery.

1 Introduction

The Association for Computing Machinery¹ is the world’s largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of \TeX for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all the different classes and packages and provide an up-to-date \LaTeX package.

This package uses only free \TeX packages and fonts included in \TeX Live, Mik \TeX and other popular \TeX distributions. It is intended to be published in these distributions itself, which minimizes users’ efforts in the installation and support of this package.

I am grateful to Michael D. Adams, Leif Andersen, Lawrence Christopher Angrave, Dirk Beyer, Andrew Black, Joachim Breitner, Yegor Bugayenko, Benjamin Byholm, John Collins, Roberto Di Cosmo, Nils Anders Danielsson, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Enrico Gregorio, Jamie Davis, Ulrike Fischer, Jason Hemann, Peter Kemp, Luis Leiva, Ben Liblit, Rholais Lii, LianTze Lim, Kuldeep S. Meel, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Scott Pakin, Tobias Pape, Henning Pohl, Philip Quinn, Mathias Rav, Andreas Reichinger, Matteo Riondato, Craig Rodkin, Bernard Rous, Feras Saad, Kerry A. Seitz, Jr., David Shamma, Gabriel Scherer, Kartik Singhal, Christoph Sommer, Stephen Spencer, Shin Hwei Tan, Daniel Thomas, Shari Trewin, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

2 User’s guide

This class uses many commands and customization options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at <https://github.com/borisveytsman/acmart>, <https://tex.stackexchange.com> or the closest \TeX Users Group. The world-wide \TeX Users Group is at <https://tug.org/>; please consider joining us if you use \TeX regularly.

2.1 Installation

Most probably, you already have this package installed in your favorite \TeX distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: <https://www.ctan.org/pkg/acmart>. The development version can be found on GitHub: <https://github.com/borisveytsman/acmart>. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

¹<http://www.acm.org/>

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their \TeX distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls`, `acm-jdslogo.png`, and `ACM-Reference-Format.bst` in places where \TeX can find them (see [1] or the documentation for your \TeX system).
3. Update the database of file names. Again, see [1] or the documentation for your \TeX system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major \TeX distributions (\TeX Live, Mac \TeX , Mik \TeX) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- *amscs*, <http://www.ctan.org/pkg/amscs>
- *amsfonts*, <http://www.ctan.org/pkg/amsfonts>
- *amsmath*, <http://www.ctan.org/pkg/amsmath>
- *binhex*, <http://www.ctan.org/pkg/binhex>
- *balance*, <http://www.ctan.org/pkg/balance>
- *booktabs*, <http://www.ctan.org/pkg/booktabs>
- *caption*, <http://www.ctan.org/pkg/caption>
- *comment*, <http://www.ctan.org/pkg/comment>
- *cm-super*, <http://www.ctan.org/pkg/cm-super>
- *cmap*, <http://www.ctan.org/pkg/cmap>
- *doclicense*, <http://www.ctan.org/pkg/doclicense>
- *draftwatermark*, <http://www.ctan.org/pkg/draftwatermark>
- *environ*, <http://www.ctan.org/pkg/environ>
- *etoolbox*, <http://www.ctan.org/pkg/etoolbox>
- *fancyhdr*, <http://www.ctan.org/pkg/fancyhdr>
- *float*, <http://www.ctan.org/pkg/float>
- *fontaxes*, <http://www.ctan.org/pkg/fontaxes>

- *geometry*, <http://www.ctan.org/pkg/geometry>
- *graphics*, <http://www.ctan.org/pkg/graphics>
- *hyperref*, <http://www.ctan.org/pkg/hyperref>
- *hyperxmp*, <http://www.ctan.org/pkg/hyperxmp>
- *iftex*, <http://www.ctan.org/pkg/iftex>
- *inconsolata*, <http://www.ctan.org/pkg/inconsolata>
- *libertine*, <http://www.ctan.org/pkg/libertine>
- *manyfoot*, <http://www.ctan.org/pkg/manyfoot>
- *microtype*, <http://www.ctan.org/pkg/microtype>
- *mmap*, <http://www.ctan.org/pkg/mmap>
- *ms*, <http://www.ctan.org/pkg/ms>
- *mweights*, <http://www.ctan.org/pkg/mweights>
- *natbib*, <http://www.ctan.org/pkg/natbib>
- *nccfoots*, <http://www.ctan.org/pkg/nccfoots>
- *newtx*, <http://www.ctan.org/pkg/newtx>
- *oberdiek*, <http://www.ctan.org/pkg/oberdiek>
- *pdftex-def*, <http://www.ctan.org/pkg/pdftex-def>
- *refcount*, <http://www.ctan.org/pkg/refcount>
- *setspace*, <http://www.ctan.org/pkg/setspace>
- *textcase*, <http://www.ctan.org/pkg/textcase>
- *totpages*, <http://www.ctan.org/pkg/totpages>
- *trimspaces*, <http://www.ctan.org/pkg/trimspaces>
- *upquote*, <http://www.ctan.org/pkg/upquote>
- *url*, <http://www.ctan.org/pkg/url>
- *xcolor*, <http://www.ctan.org/pkg/xcolor>
- *xkeyval*, <http://www.ctan.org/pkg/xkeyval>
- *xstring*, <http://www.ctan.org/pkg/xstring>

2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[<options>]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals, transactions, and course materials, while formats starting with `sig` are intended for proceedings published as books.

Sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format. The templates `sample-acmsmall-conf.tex` and `sample-acmtog-conf.tex` show how to enter conference information. Note that you need to comment out `\acmJournal{...}` line for such papers to get the conference information in the footers and headers.

Starting in 2020, ACM retired formats `sigchi` and `sigchi-a`. SIGCHI conferences now use `sigconf` format for their publications. If a file uses `sigchi` format, a warning is issued, and the format is automatically switched to `sigconf`. Format `sigchi-a` can be used for non-ACM documents only (see Section 2.22). The format `acmcp` is used for ACM cover pages discussed in Section 2.5.

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

Two samples in the `samples` directory, `manuscript` and `acmsmall-submission`, show manuscripts formatted for submission to ACM.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding BibTeX style is based on `natbib`. In most cases you do not need to set it. See Section 2.14.

Table 1: The possible values for the format option

Value	Meaning
manuscript	A manuscript. This is the default.
acmsmall	Small single-column format. Used for ACMJCSS, CIE, CSUR, DLT, FAC, GAMES, JACM, JATS, JDIQ, JDS, JEA, JERIC, JETC, JRC, PACM-CGIT, PACMHCI, PACMMOD, PACMNET, PACMPL, PACMSE, POMACS, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TDS, TEAC, TECS, TELO, THRI, THIS, TIOT, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPML, TOPS, TORS TOS, TOSEM, TOSN, TQC, TRET, TSAS, TSC, TSLP, and TWEB, including special issues.
acmlarge	Large single-column format. Used for DTRAP, HEALTH, IMWUT, JOCCH, and TAP, including special issues.
acmtog	Large double-column format. Used for TOG, including annual conference Technical Papers.
sigconf	Proceedings format for most ACM conferences (with the exception of SIGPLAN) and all ICPS volumes.
sigplan	Proceedings format for SIGPLAN conferences.
acmengage	ACM EngageCSEdu Course materials.
acmcp	ACM cover page.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

The option `authordraft` is intended for author’s drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase “Unpublished working draft. Not for distribution”, which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overridden by setting these options to `false` *after* setting `authordraft` to `true`.

The option `balance` determines whether the last page in the two column mode has balanced columns. By default it is `true`; however, it may lead to problems for some documents. When there are many figures near the end of the document, the attempts to balance columns may lead to the loss of the figures. Set this option to `false` if you encounter problems. An alternative is the (experimental) option `pbalance`, which uses the new package `pbalance`. You may want to try `pbalance=true` to see if you get better results.

The option `urlbreakonhyphens` determines whether URLs can be split between lines after hyphens. By default it is `true`. Set it to `false` to disallow these breaks.

The option `language` is used to define the languages for the multi-language papers. It is discussed in Section 2.6.

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the natbib package (see Section 2.14)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers. Currently such documents allow only a Creative Commons license.
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.10
balance	true	Whether to balance the last page in two column mode
pbalance	false	Whether to balance the last page in two column mode using pbalance package
urlbreakonhyphens	true	Whether to break urls on hyphens

2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors. Others, like `\acmVolume` and `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be used before `\maketitle`.

This class internally loads the `amsart` class, so many top-matter commands are inherited from `amsart` [2].

`\acmJournal` The macro `\acmJournal{\shortName}` sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication in *uppercase*, for example,

```
\acmJournal{TOMS}
```

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

`\acmConference` The macro `\acmConference[\short name][\name][\date][\venue]` is used for conference proceedings published in the book form. The arguments are the following:

short name: the abbreviated name of the conference (optional).

name: the name of the conference.

date: the date(s) of the conference.

venue: the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November
12--16}{Dallas, TX, USA}
\acmConference[SA'15 Art Papers]{November 02--06, 2015}{Kobe, Japan}
```

`\acmBooktitle` By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command `\acmConference` above. However, sometimes the book title is different. The command `\acmBooktitle` can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the
Art, Science and Engineering of Programming (Programming '17)}
```

An ACM paper should have either `\acmJournal` or `\acmConference` command. If it has both (or more) commands, the last one takes precedence. Note that if you have the command `\acmConference` in a journal format like `acmsmall`, the class will use conference format for `bibstrip` and reference citation formatting. In the samples directory there is a file `sample-acmsmall-conf.tex` with the example of this usage.

An ACM Engage material should *not* use `\acmJournal` or `\acmConference` command. It may use `\acmBooktitle` to override the default *ACM EngageCSEdu*. It should use `\acmYear` to set the date of the material.

`\editor` In most cases, conference proceedings are edited. You can use the command `\editor{<editor>}` to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}
\editor{Theo D'Hondt}
\editor{Wolfgang De Meuter}
```

`\title` The command `\title`, as in the `amsart` class, has two arguments: one optional, and one mandatory:

```
\title[<ShortTitle>]{<FullTitle>}
```

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

It is expected that this command is inserted by the author of the manuscript.

`\subtitle` Besides title, ACM classes allow a subtitle, set with the `\subtitle{<subtitle>}` macro.

The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript *and* is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.

`\author` The basic commands are `\author`, `\orcid` (for the researchers registered with ORCID, <http://www.orcid.org/>), `\affiliation` and `\email`. In the simplest case, you

`\affiliation` enter them in this order:

```
\email
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
```

Do *not* use the \LaTeX `\and` macro or commas, or `\\` between the authors! Each author deserves his or her own `\author` command. An attempt to list several authors or their e-mails in one command leads to a warning or an error. This is not a bug, but the expected behavior.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

ACM strongly encourages that you include ORCIDs for all authors before compiling or submitting for review and/or production processing.

If you do not have an ORCID, you may get one for free by registering at <http://www.orcid.org/>.

Sometimes an author has several affiliations. In this case, the `\affiliation` command should be repeated:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

Similarly you can repeat the `\email` command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author A_1 is affiliated with institutions I_1 and I_2 , while author A_2 is affiliated with I_2 only, author A_3 is affiliated with I_1 and I_3 , etc.). The recommended solution is to put the `\affiliation` commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```
\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}
```

However, this format is not generally recommended.

`\additionalaffiliation` In some cases, too many affiliations can take too much space. The command `\additionalaffiliation{<affiliation>}` creates a footnote after an author's name with the words "Also with {<affiliation>}". You should use this command only as a last resort. An example of usage is:

```
\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
  \institution{The Th{\o}rv{\a}ld Group}
  \city{Hekla}
  \country{Iceland}}
\affiliation{%
  \institution{Institute for Clarity in Documentation}
  \city{Dublin}
  \state{Ohio}}
```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Th{\o}rv{\a}ld Group.

`\position` The `\affiliation` and `\additionalaffiliation` commands are further structured to interact with the metadata extraction tools. Inside these commands you should use

```
\institution
\department
  \city
  \state
  \country
```

the `\position`, `\institution`, `\department`, `\city`, `\state`, and `\country` macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or `\\` between the elements of `\affiliation`. They will be provided automatically.

The fields `\institution`, `\city` and `\country` are mandatory. If they are not provided, an error or a warning is issued. Currently the absence of `\country` produces an error; ACM may change this in the future.

Starting 2024, ACM no longer collects or print postal addresses of the authors. Thus the commands `\streetaddress` and `\postcode`, present in the previous versions of the class, now produce a warning.

An example of the author block:

```

\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
  \institution{University of New South Wales}
  \department{School of Biomedical Engineering}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
  \institution{University of Pennsylvania}
  \city{Philadelphia}
  \state{PA}
  \country{USA}}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}

```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command `\department` several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```

\affiliation{%
  \department[0]{Department of Lunar Studies} % 0 is the default

```

```

\department[1]{John Doe Institute} % higher than 0
\institution{University of San Serriffe}
\country{San Serriffe}

```

and

```

\affiliation{%
\department{Department of Lunar Studies} % Not in the John Doe Institute!
\department{John Doe Institute}
\institution{University of San Serriffe}
\country{San Serriffe}
}

```

`\thanks` Like `amsart` (and unlike standard \LaTeX), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.13).

`\authorsaddresses` In some formats, addresses are printed as a footnote on the first page. By default \LaTeX typesets them itself using the information you give it. However, you can override its choice using the command `\authorsaddresses{<contact addresses>}`, for example,

```

\authorsaddresses{%
Authors' addresses: G.~Zhou, Computer Science Department, College of
William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;
V.~B'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;
A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal
Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,
Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,
Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University
of Virginia, School of Engineering Charlottesville, VA 22903, USA;
T. F. Abdelzaher, (Current address) NASA Ames Research Center,
Moffett Field, California 94035.}

```

You can *suppress* printing authors' addresses by setting them to an empty string: `\authorsaddresses{}`. Please note that authors' addresses are mandatory for journal articles.

`\titlenote` While the command `\thanks` generates a note without a footnote mark, sometimes
`\subtitlenote` the authors might need notes more tightly connected to the title, subtitle or author. The
`\authornote` commands `\titlenote`, `\subtitlenote` and `\authornote` that follow the corresponding commands (`\title`, `\subtitle` and `\author`) generate such notes. For example,

```

\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}

```

Please never use a `\footnote` inside an `\author` or `\title` command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

`\authornotemark` Sometimes one may need to have the same footnote connected to several authors. The command `\authornotemark[<number>]` adds just the footnote mark, for example,

```

\author{A. U. Thor}

```

```

\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]

```

The correct numbering of these marks is the responsibility of the user.

```

\acmVolume    The macros \acmVolume, \acmNumber, \acmArticle, \acmYear and \acmMonth are
\acmNumber    inserted by the editor and set the journal volume, issue, article number, year and month
\acmArticle    correspondingly. The arguments of all these commands, including \acmMonth, is numer-
\acmYear       ical. For example,
\acmMonth
\acmVolume{9}
\acmNumber{4}
\acmArticle{39}
\acmYear{2010}
\acmMonth{3}

```

Note that `\acmArticle` is used not only for journals but also for some conference proceedings.

```

\acmArticleSeq    The articles in the same issue of a journal have a sequence number. By default it is
                  the same as the article number, but the command \acmArticleSeq{<n>} can be used to
                  change it:

```

```

\acmArticle{39} % The sequence number will be 39 by default
\acmArticleSeq{5} % We redefine it to 5

```

```

\acmSubmissionID    If your paper got a Submission ID from the Conference Management System, put it
                    here:

```

```

\acmSubmissionID{123-A56-BU3}

```

```

\acmISBN    Book-like volumes have ISBN numbers attached to them. The macro \acmISBN{<ISBN>}
            sets it. Normally it is set by the typesetter, for example,

```

```

\acmISBN{978-1-4503-3916-2}

```

Setting it to the empty string, as `\acmISBN{}`, suppresses printing the ISBN.

```

\acmDOI    The macro \acmDOI{<DOI>} sets the DOI of the article, for example,

```

```

\acmDOI{10.1145/9999997.9999999}

```

It is normally set by the typesetter. Setting it to the empty string, as `\acmDOI{}`, suppresses the DOI.

```

\acmBadge    Some conference articles get special distinctions, for example, the artifact evaluation
            for PPOPP 2016 (see http://ctuning.org/ae/ppopp2016.html). These articles display
            special badges supplied by the conference organizers. This class provides command to
            add these badges: \acmBadge[<url>]{<graphics>}. The arguments have the following
            meaning: [<url>], if provided, sets the link to the badge authority in the screen version,
            while {<graphics>} sets the graphics file with the badge image. The file must be a cropped

```

square, which is scaled to a standard size in the output. For example, if the badge image is `ae-logo.pdf`, the command is

```
\acmBadge[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

The command can be repeated, if a paper has several badges.

`\startPage` The macro `\startPage{<page>}` sets the first page of the article in a journal or book. It is used by the typesetter.

`\terms` The command `\keywords{<keyword, keyword,...>}` sets keywords for the article.

`\keywords` They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control,  
multi-channel, radio interference, time synchronization}
```

`CCSXML (env)` ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications *and* in the metadata in various databases. Therefore you need to provide both \TeX commands and XML metadata with the paper.

The tool at <http://dl.acm.org/ccs.cfm> can be used to generate CCS codes. After you select the topics, click on “Generate CCS codes” to get results like the following:

```
\begin{CCSXML}  
<ccs2012>  
  <concept>  
    <concept_id>10010520.10010553.10010562</concept_id>  
    <concept_desc>Computer systems organization~Embedded systems</concept_desc>  
    <concept_significance>500</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10010520.10010575.10010755</concept_id>  
    <concept_desc>Computer systems organization~Redundancy</concept_desc>  
    <concept_significance>300</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10010520.10010553.10010554</concept_id>  
    <concept_desc>Computer systems organization~Robotics</concept_desc>  
    <concept_significance>100</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10003033.10003083.10003095</concept_id>  
    <concept_desc>Networks~Network reliability</concept_desc>  
    <concept_significance>100</concept_significance>  
  </concept>  
</ccs2012>  
\end{CCSXML}
```

```
\ccsdesc[500]{Computer systems organization~Embedded systems}  
\ccsdesc[300]{Computer systems organization~Redundancy}  
\ccsdesc{Computer systems organization~Robotics}  
\ccsdesc[100]{Networks~Network reliability}
```

You just need to copy this code and paste it in your paper anywhere before `\maketitle`.

Table 3: Parameters for the `\setcopyright` command

Parameter	Meaning
<code>none</code>	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
<code>acmlicensed</code>	The authors retain the copyright but license the publication rights to ACM.
<code>rightsretained</code>	The authors retain the copyright and publication rights to themselves or somebody else.
<code>usgov</code>	All the authors are employees of the US government.
<code>usgovmixed</code>	Some authors are employees of the US government.
<code>cagov</code>	All the authors are employees of the Canadian government.
<code>cagovmixed</code>	Some authors are employees of the Canadian government.
<code>licensedusgovmixed</code>	Some authors are employees of the US government, and the publication rights are licensed to ACM.
<code>licensedcagov</code>	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
<code>licensedcagovmixed</code>	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
<code>othergov</code>	Authors are employees of a government other than the US or Canada.
<code>licensedothergov</code>	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
<code>iw3c2w3</code>	Special statement for conferences organized by IW3C2.
<code>iw3c2w3g</code>	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.
<code>cc</code>	Creative Commons license. If this key is set, <i>doclicense</i> images are used to typeset the license. See also <code>\setcctype</code> command.
<code>acmcopyright</code>	The authors transfer the copyright to the ACM. This choice is no longer available for the non-commissioned authors and will trigger a warning.

CCS Concepts and user-defined keywords are required for all articles over two pages in length, and are optional for one- and two-page articles (or abstracts).

`\setcopyright` There are several possibilities for the copyright of the papers published by the ACM: the authors may license the paper to the ACM, some or all authors might be employees of the US or Canadian governments, etc. Accordingly the command `\setcopyright{...}` is introduced. Its argument is the copyright status of the paper, for example, `\setcopyright{acmcopyright}`. The possible values for this command are listed in Table 3. This command must be placed in the preamble, before `\begin{document}`. Additional information about ACM copyright rules is discussed in Section ??.

`\setcctype` If Creative Commons license is used, the package by default chooses CC-BY 4.0 Attribution 4.0 International license. You can override this choice by the command `\setcctype[version]{type}`, where [*version*] can be either 3.0 or 4.0 (4.0 by default), and {*type*} can be one of zero, by, by-sa, by-nd, by-nc, by-nc-sa, by-nc-nd (see <https://creativecommons.org/licenses/> for the explanation). This command

should be used in the preamble only.

Material published under Creative Commons license should include the corresponding icon. A modern T_EX distribution includes these icons in the package *doclicense*. In case your distribution does not have them, ACM provides a file `cciicons.zip` with these icons. Just unzip it in the same directory where your document is.

The ACM submission software should generate the right command for you to paste into your file.

`\copyrightyear` Each copyright statement must have the year of copyright. By default it is the same as `\acmYear`, but you can override this using the macro `\copyrightyear`, e.g.,

```
\acmYear{2016}
\copyrightyear{2015}
```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option `authorversion=true` produces a special form of the copyright statement for this case. Note that you still need the `\setcopyright` command and (optionally) `\copyrightyear` command to tell T_EX about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors' version, the page breaks might be different between them.

`abstract (env.)` The environment `abstract` must *precede* the `\maketitle` command. Again, this is different from the standard L^AT_EX. Putting `abstract` after `\maketitle` will trigger an error.

`teaserfigure (env.)` A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment `teaserfigure` is used for these figures. This environment must be used *before* `\maketitle`, for example,

```
\begin{teaserfigure}
  \includegraphics[width=\textwidth]{sampleteaser}
  \caption{This is a teaser}
  \label{fig:teaser}
\end{teaserfigure}
```

`\settopmatter` Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command `\settopmatter{<settings>}`. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter `authorsperrow` requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see `sample-sigconf.pdf`, `sample-sigplan.pdf`, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

Table 4: Settings for the `\settopmatter` command

Parameter	Values	Meaning
<code>printccs</code>	true/false	Whether to print CCS categories
<code>printacmref</code>	true/false	Whether to print the ACM bibliographic entry
<code>printfolios</code>	true/false	Whether to print page numbers (folios)
<code>authorsperrow</code>	numeric	Number of authors per row for the title page in conference proceedings formats

However, in most cases you should *not* do this and should use the default settings. Setting `authorsperrow` to 0 will revert it to the default settings.

The parameter `printacmref` specifies whether to print the ACM bibliographic entry (default), or not. Note that this entry is required for all articles over one page in length, and is optional for one-page articles (abstracts).

`\received` The command `\received[<stage>]{<date>}` sets the history of the publication. The [*<stage>*] argument is optional; the default is Received for the first date and revised for the subsequent ones. For example,

```
\received{20 February 2007}
\received[revised]{12 March 2009}
\received[accepted]{5 June 2009}
```

`\maketitle` The macro `\maketitle` must be the last command in the top-matter group. That is it must follow the commands defined in this section.

`\shortauthors` After the command `\maketitle`, the macro `\shortauthors` stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

2.4 Top matter of ACM Engage materials

ACM Engage materials resemble conference proceedings, but have some special features. First, as a rule, they are released under a Creative Commons license. By default CC-BY is used. However, if you want to use another variant of CC license, use `\setcctype` command, for example, `\setcctype{by-nc}`. Second, abstract is called *synopsis*. Third, there are special top matter items used for the materials, such as *Course*, *Resource Type*, *Programming Language*, *CS Topics*.

`\setengagemetadata` These items are set with the command `\setengagemetadata{<name>}{<value>}`, for example,

```
\setengagemetadata{Course}{CS1}
\setengagemetadata{Programming Language}{Python}
\setengagemetadata{Knowledge Unit}{Programming Concepts}
\setengagemetadata{CS Topics}{Functions, Data Types, Expressions,
Mathematical Reasoning}
```

Note that the type of Creative Commons license, if such license is used, is automatically added to the metadata.

2.5 ACM cover page

ACM cover pages are forms of extended abstracts that are added to journals at the late stage. Authors prepare them as separate .tex files using acmcp format. At present only JDS uses them, but in the future this may change.

There are several top matter commands specific for this format.

`\acmArticleType` There are five article types accepted by JDS: *Research* (the default), *Review*, *Discussion*, *Invited*, and *Position*. The command `\acmArticleType{<type>}` sets the article type, for example

```
\acmArticleType{Review}
```

`\acmCodeLink` The commands `\acmCodeDataLink{<link>}` and `\acmDataLink{<link>}` set the links
`\acmDataLink` to the data and code accompanying the paper, for example,

```
\acmCodeLink{https://github.com/repository/code}  
\acmDataLink{https://datadryad.org/stash/dataset/doi:DOI}
```

You may repeat these commands if you have several repositories.

`\acmContributions` The command `\acmContributions{<contributions>}` sets the contributions of the authors, for example,

```
\acmContributions{AW designed the study, CD performed it, all  
authors contributed to the writing.}
```

ACM cover page should have the following obligatory sections:

- Problem statement,
- Methods,
- Results,
- Significance.

Sometimes the addresses extracted from the authors' data are too long to fit on the page. In this case the command `\authorsaddresses` can be use to override them, for example,

```
\authorsaddresses{Corresponding author: Ben Trovato,  
\href{mailto:trovato@corporation.com}{trovato@corporation.com};  
Institute for Clarity in Documentation, P.O. Box 1212, Dublin,  
Ohio, USA, 43017-6221}
```

The design of the cover page may require additional runs of latex to make the elements of the page align.

2.6 Internationalization

ACM accepts publications in languages other than English, as well as papers in English with translations of titles, subtitles, keywords and abstracts into other languages. Papers in languages other than English usually have titles, subtitles (if applicable), keywords and abstracts in English. Note that CCS concepts are always typeset in English.

To submit these papers you need to set the option `language` in the `\documentclass` command. This option can be repeated, for example,

```
\documentclass[sigconf, language=french, language=english]{acmart}
```

The last language in the list is the main language of the paper, i.e. the one for the main title, abstract, body, etc. The other languages are *secondary*, and used for translated titles, keywords, abstracts. Thus the paper above is written in English, and has a secondary abstract and a secondary title in French. On the other hand, a paper in French with secondary titles and abstracts in English and German should use, for example

```
\documentclass[sigconf,
               language=german,
               language=english,
               language=french]{acmart}
```

This key can use any language defined in *babel* package [3] (currently the package is tested with English, French, German and Spanish languages; other languages may require a translation of `\keywordsname` macro). Actually *acmart* loads *babel* internally, so you can use the facilities provided by this package.

If this key is set, you have access to several additional top matter commands.

`\translatedtitle` The commands `\translatedtitle{<language>}title`, `\translatedsubtitle{<language>}subtitle`
`\translatedsubtitle` and `\translatedkeywordslanguagekeywords` are used to set title, subtitle and key-
`\translatedkeywords` words in the secondary language. For example, a paper in English with French title
and abstract may set

```
\title{A note on computational complexity}
\translatedtitle{french}{Remarque sur la complexit'e de calcul}
```

while a paper in French should set

```
\title{Remarque sur la complexit'e de calcul}
\translatedtitle{english}{A note on computational complexity}
```

`translatedabstract (env.)` Similarly, `translatedabstract` environment has a mandatory language argument, for example,

```
\begin{translatedabstract}{english}
  This is the English version of the abstract
\end{translatedabstract}
```

You can repeat these commands if a paper has more than one secondary language.

Use the standard commands (`\title`, `\subtitle`, `\keywords`, `abstract`) for the main language of the paper.

2.7 Algorithms

There are now several good packages for typesetting algorithms [4, 5, 6], and the authors are free to choose their favorite one.

2.8 Figures and tables

The new ACM styles use the standard L^AT_EX interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.
2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

figure, **table**: a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

figure*, **table*** in two-column formats, a special figure or table taking a full text width.

teaserfigure: a special figure before `\maketitle`.

3. Accordingly, when scaling images, one should use the following sizes:
 - (a) For `teaserfigure`, `figure` in one-column mode or `figure*` in two-column mode, use `\textwidth`. In one-column mode, you can also use `\columnwidth`, which coincides with `\textwidth` in this case.
 - (b) For `figure` in two-column mode, use `\columnwidth`.

It is strongly recommended to use the package `booktabs` [7] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.
2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a `\minipage` environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a
table footnote. This is a table footnote.} &
(200\,m$\times$200\,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\end{tabular}
\end{center}
\end{minipage}
\end{table}
```

```

Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table
sourcenote. This is a table sourcenote. This is a table
sourcenote.

\emph{Note:} This is a table footnote.
\end{minipage}
\end{table}

```

Tables and figures are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

2.9 Descriptions of images

`\Description` Some readers of ACM publications might be visually challenged. These readers might use a voice-over software to read aloud the papers. It is important to provide them a description of each image used in the paper.

The command `\Description[<short description>]{<long description>}` should be placed inside every figure, `teaserfigure` or `marginfigure` environment to provide a description of the image(s) used in the figure. Unlike `\caption`, which is used alongside the image, `\Description` is intended to be used instead of the image, for example,

```

\begin{figure}
\centering
\includegraphics{voltage}
\Description{A bell-like histogram centered at $0.5\text{V}$ with most
measurements between $0.2\text{V}$ and $0.8\text{V}$}
\caption{Histogram of the measurements of voltage}
\label{fig:voltage}
\end{figure}

```

At present the lack of descriptions generates a warning at compilation.

2.10 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

acmplain: this is the style used for theorem, conjecture, proposition, lemma and corollary, and

acmdefinition: this is the style used for example and definition.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

Sometimes authors want to define new theorem-like constructs that use theorem counters. These constructs must be defined either after `\begin{document}`, or delayed using `\AtEndPreamble` macro, for example,

```
\AtEndPreamble{%
  \theoremstyle{acmdefinition}
  \newtheorem{remark}[theorem]{Remark}}
```

2.11 Online-only and offline-only material

`printonly` (*env.*) Some supplementary material in ACM publications is put online but not in the printed `screenonly` (*env.*) version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to `true`. Conversely, the text inside the environment `printonly` is typeset only when this option is set to `false`. For example,

```
\section{Supplementary materials}

\begin{printonly}
  Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
  (The actual supplementary materials.)
\end{screenonly}
```

We use the `comment` package for typesetting this code, so `\begin` and `\end` should start on a line of their own with no leading or trailing spaces.

2.12 Note about anonymous mode

`anonsuppress` (*env.*) When the option `anonymous` is selected, \TeX suppresses author information (including the number of authors) for an anonymous review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
  This is the continuation of the previous work by the author
  \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start on a line of their own with no leading or trailing spaces.

`\anon` To suppress short snippets of information, use the command `\anon[<substitute>]{<suppressed-text>}`. By default [*<substitute>*] is the word ANONYMOUS. Examples:

```
This work was performed at \anon{NSA}.
This work was performed at \anon[No Such Agency]{NSA}.
```

2.13 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

`acks (env)` The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start on a line of their own with no leading or trailing spaces.

`\grantsponsor` All financial support *must* be listed using the commands `\grantsponsor` and
`\grantnum` `\grantnum`. These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

```
\grantsponsor{\<sponsorID>}{\<name>}{\<url>}
\grantnum[\<url>]{\<sponsorID>}{\<number>}
```

Here `{\<sponsorID>}` is the unique ID used to match grants to sponsors, `{\<name>}` is the name of the sponsor, `{\<url>}` is its URL, and `{\<number>}` is the grant number. The `{\<sponsorID>}` of the `\grantnum` command must correspond to the `{\<sponsorID>}` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of the `\grantnum` command.

At present `{\<sponsorID>}` is chosen by the authors and can be an arbitrary key in the same way the label of a `\cite` is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
  The authors would like to thank Dr. Yuhua Li for providing the
  matlab code of the \textit{BEPS} method.

  The authors would also like to thank the anonymous referees for
  their valuable comments and helpful suggestions. This work is
  supported by the \grantsponsor{GS501100001809}{National Natural
  Science Foundation of
  China}{\https://doi.org/10.13039/501100001809} under Grant
  No. : ~\grantnum{GS501100001809}{61273304}
  and~\grantnum[\http://www.nnsf.cn/youngscientists]{GS501100001809}{Young
  Scientists' Support Program}.
\end{acks}
```

2.14 Bibliography

The ACM lets you use either `BibTEX` or `BibLTEX` to process your references: they require slightly different setup of your `LTEX` file, as detailed in the following subsections.

2.14.1 Processing using `BibTEX`

This uses the `natbib` package for formatting references and the `BibTEX` style file `ACM-Reference-Format.bst` for `BibTEX` processing. You can disable loading of `natbib`

using the option `natbib=false` in `\documentclass`. However, it is not recommended, as well as the use of Bib \TeX styles other than `ACM-Reference-Format.bst`, and may delay the processing of the manuscript.

`\citestyle` If you use `natbib`, you can select one of two predefined citation styles using the command `\citestyle`: the author-year format `acmauthoryear` or the numeric format `acmnumeric`. For example,

```
\citestyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

`\setcitestyle` You can further customize `natbib` using the `\setcitestyle` command, for example,

```
\setcitestyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitestyle{nosort}
```

It is useful if you do not like the way `natbib` sorts citation lists.

If you use `natbib`, then commands like `\citep` and `\citeauthor` are automatically supported. The command `\shortcite` is the same as `\cite` in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command `\citeyear` put the year in parentheses. In version 1.48 and later it produces just the year; the command `\citeyearpar` can be used to emulate its old behavior.

There are several customized Bib \TeX entry types and fields in the ACM style file `ACM-Reference-Format.bst` that you may want to be aware of.

The style supports the fields `doi` and `url`, for example,

```
doi = "10.1145/1188913.1188915",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",
```

Normally the printing of URL is suppressed if DOI is present. However, there is a special field `distinctURL`. If it is present and is not zero, URL is printed even if DOI is present.

The style supports the arXiv-recommended fields `eprint` and (optionally) `primaryclass`, for example,

```
eprint = "960935712",
primaryclass = "cs",
```

See the examples at <https://arxiv.org/help/hypertex/bibstyles>.

There are several special entry types. Types `online` and `game` are used for Web pages and games, for example,

```
@online{Thornburg01,
  author = "Harry Thornburg",
  year = "2001",
  title = "Introduction to Bayesian Statistics",
  url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
  month = mar,
  lastaccessed = "March 2, 2005",
}
```

Entry types `artifactsoftware`, `artifactdataset` (with synonyms `software` and `dataset`) can be used to cite software artifacts and datasets, for example,

```
@ArtifactSoftware{R,
  title = {R: A Language and Environment for Statistical Computing},
  author = {{R Core Team}},
  organization = {R Foundation for Statistical Computing},
  address = {Vienna, Austria},
  year = {2019},
  url = {https://www.R-project.org/},
}
@ArtifactDataset{UMassCitations,
  author = {Sam Anzaroot and Andrew McCallum},
  title = {{UMass} Citation Field Extraction Dataset},
  year = 2013,
  url =
    {http://www.iesl.cs.umass.edu/data/data-umasscitationfield},
  lastaccessed = {May 27, 2019}
}
```

For these entry types you can use the `lastaccessed` field to add the access date for the URL.

There are two ways to enter video or audio sources in the bibliography corresponding to two different possibilities. For standalone sources available online, you can use an online entry and set its `howpublished` field. For example,

```
@online{Obama08,
  author = "Barack Obama",
  year = "2008",
  title = "A more perfect union",
  howpublished = "Video",
  day = "5",
  url = "http://video.google.com/videoplay?docid=6528042696351994555",
  month = mar,
  lastaccessed = "March 21, 2008",
}
```

For sources available as attachments to conference proceedings and similar documents, you can use the usual `inproceedings` entry type and set its `howpublished` field:

```
@Inproceedings{Novak03,
  author = "Dave Novak",
  title = "Solder man",
  booktitle = "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
  year = "2003",
  publisher = "ACM Press",
  address = "New York, NY",
  pages = "4",
  month = "March 21, 2008",
  doi = "10.9999/woot07-S422",
  howpublished = "Video",
}
```

Sometimes you need to cite a complete issue of a journal. The periodical entry type is intended for this:

```
@periodical{JCohen96,
  key =      "Cohen",
  editor =   "Jacques Cohen",
  title =    "Special issue: Digital Libraries",
  journal =  "Communications of the {ACM}",
  volume =   "39",
  number =   "11",
  month =    nov,
  year =     "1996",
}
```

If you do not know the year of publication, the style will add “[n. d.]” (for “no date”) to the entry.

If you do not know the author (this is often the case for online entries), use the key field to add a key for sorting and citations, for example,

```
@online{TUGInstmem,
  key =      {TUG},
  year =     2017,
  title =    "Institutional members of the {\TeX} Users Group",
  url =      "http://wwtug.org/instmem.html",
  lastaccessed = "May 27, 2017",
}
```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with “von” or “van” part: should Ludwig van Beethoven be sorted under “V” or under “B”? The American practice is to use “van” in sorting, i.e. to file van Beethoven under “V”. However, some authorities recommend to sort Dutch persons according to their last names (see e.g. https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf). While I do not want to take a part in this dispute, I would like to point to the old “noopsort” trick by Oren Patashnik. Add to the .bib file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
author = {Ludwig {\noopsort{Beethoven}}van Beethoven},
```

This will make the author to be sorted as “Beethoven” rather than “van Beethoven”.

The current bst style defines a number of macros for common journal names. In particular, all journals listed in Table 5 are included, so you can use strings like `journal = taccess` for *ACM Transactions on Accessible Computing*.

2.14.2 Processing using Bib \LaTeX

You will find in this package two sets of style files for Bib \LaTeX , `acmnumeric` and `acmauthoryear`, that mimic the behavior of the `ACM-Reference-Format.bst` Bib \TeX style. They provide you access to all the power of Bib \LaTeX and already include support for advanced citation of software artifacts from the `biblatex-software` package, also separately available on CTAN. Look at the `biblatex-software` documentation to learn more about what it offers.

There are a few key differences in how the \LaTeX sources are set up when using Bib \LaTeX instead of Bib \TeX , that we summarize briefly here (please refer to the official Bib \LaTeX documentation for more details).

First of all, you need to pass the `natbib=false` option to the document class, and remove the `\citetstyle{acmauthoryear}` command from the sources (if present).

Then, in the preamble of your document you need to load the Bib \LaTeX package and select the appropriate bibliography style, as follows

```
\RequirePackage[
  datamodel=acmdatamodel,
  style=acmnumeric, % use style=acmauthoryear for publications that require it
]{biblatex}
```

Also in the preamble, you need to declare the bibliography sources files using the `\addbibresource` command (one `\addbibresource` command per source file), e.g.:

```
\addbibresource{software.bib}
\addbibresource{sample-base.bib}
```

At the end of the document, where you want the bibliography to appear, you need to place the command `\printbibliography`.

Look at the `sample-*-biblatex.tex` files that can be found in the `samples` directory after running `make` for templates showcasing these Bib \LaTeX styles.

2.15 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [8]: `ACMBlue`, `ACMYellow`, `ACMOrange`, `ACMRed`, `ACMLightBlue`, `ACMGreen`, `ACMPurple` and `ACMDarkBlue`. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.
2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).
3. Most printing is in black and white.

4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

Note: It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: <http://colorbrewer2.org/>
2. ACE: The Accessible Colour Evaluator: <http://daprlab.com/ace/> for designing WCAG 2.0 compliant palettes.

2.15.1 Manual bibliography

Some people create bibliographies manually, writing down `\bibitem` commands explicitly. This approach is *not* recommended for ACM styles. The reason is, ACM submissions, besides being typeset, are also processed by special programs that extract metadata and references. Bibliographies created automatically with ACM styles contain customized macros for these programs, for example,

```
\bibitem[Ablamowicz and Fauser(2007)]%
  {Ablamowicz07}
\bibfield{author}{\bibinfo{person}{Rafal Ablamowicz} {and}
  \bibinfo{person}{Bertfried Fauser}.} \bibinfo{year}{2007}\natexlab{}.
\newblock \bibinfo{booktitle}{\emph{CLIFFORD: a Maple 11 Package for Clifford
  Algebra Computations, version 11}}.
\newblock
\urldef\tempurl%
\url{http://math.tntech.edu/rafal/cliff11/index.html}
\showURL{%
Retrieved February 28, 2008 from \tempurl}
```

Manual bibliographies without these macros may slow down the publication process, and thus are not recommended for ACM submissions.

2.16 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [9] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomencl` [10] and `glossaries` [11] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokenpenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [12], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

2.17 Counting words

Some ACM conferences use word count limits for papers. The calculation of word number for a paper with math, tables and figures is not a trivial task. Currently the authoritative word count is done by translating the PDF to text and using `wc -w` on the output. Authors can use the package `texcount` (used by Overleaf) to get an estimate of the word count. To facilitate this one adds to the beginning of the package metacomments

```
%TC:macro \cite [option:text,text]
%TC:macro \citep [option:text,text]
%TC:macro \citet [option:text,text]
%TC:envir table 0 1
%TC:envir table* 0 1
%TC:envir tabular [ignore] word
%TC:envir displaymath 0 word
%TC:envir math 0 word
%TC:envir comment 0 0
```

and uses `\begin{math}... \end{math}` instead of dollar signs for math. Note that the count is in any case approximate, and the final decision of editors is based on PDF count.

The script `texcount` provides a report of word count in the document.

2.18 Disabled or forbidden commands

The goal of `acmart` package is to provide a uniform look and feel for ACM publications. Accordingly, a number of commands is forbidden or disabled in `acmart`.

You may *not* put several authors or several e-mails into a `\author` or `\email` command. This may lead to errors or warning.

You cannot change `\baselinestretch` in your document: this produces an error.

You should not abuse the command `\vspace`: this command may disturb the typesetting of ACM papers.

You should not load `amssymb` package since the package `acmart` defines the corresponding symbols itself.

2.19 Notes for wizards

Sometimes you need to change the behavior of `acmart`. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* `acmart` is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the `titletoc` package with `acmart`. This package should be loaded before `hyperref`. However, since `acmart` loads `hyperref` itself,

the line `\usepackage{titletoc}` in the preamble will lead to grief (see <http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style>).

Another example is passing options to a package. Suppose you want to use the `dvipsnames` option of the `xcolor` package. Normally you cannot do this because `acmart` loads this package itself without options.

The file `acmart-preload-hook.tex` can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}}
```

then `titletoc` will be loaded before `hyperref`. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass `dvipsnames` to `xcolor`.

Important note. This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support*. If you decide to use this hook, you are on your own.

`\AtBeginMaketitle` Another hook is `\AtBeginMaketitle`. The commands in this hook are executed before `\maketitle`.

2.20 Currently supported publications

Table 5: ACM publications and arguments of the `\acmJournal` command

Abbreviation	Publication
ACMJCSS	ACM Journal on Computing and Sustainable Societies
CIE	ACM Computers in Entertainment
CSUR	ACM Computing Surveys

TWEB	ACM Transactions on the Web

Besides the publications listed in Table 5, there is a special “publication” type FACMP, a forthcoming ACM publication, reserved for new journals which are not assigned an ISSN yet.

2.21 Samples

There are several samples of `acmart` documents, that can serve as templates for the authors. Among them `sample-sig...` are templates for conference papers, while `sample-acm...` are templates for journal articles and special materials.

Here is the list of the samples:

sample-manuscript: A proceedings paper in the manuscript format.

sample-acmsmall: A journal paper in the `acmsmall` format.

sample-acmsmall-biblatex: A journal paper using experimental *biblatex* bibliography processing.

sample-acmlarge: A journal paper in the `acmlarge` format.

sample-acmtog: A journal paper in the `acmtog` format.

sample-sigconf: A proceedings paper in the standard `sigconf` format.

sample-sigconf-biblatex: A proceedings paper in the `sigconf` format using experimental *biblatex* bibliography processing.

sample-sigconf-authordraft: A proceedings paper in the `sigconf` format with the `authordraft` option selected.

sample-sigconf-i13n: A proceedings paper in the `sigconf` format with multilanguage titles and abstract.

sample-sigconf-xelatex: A proceedings paper in the `sigconf` format, Xe \LaTeX version.

sample-sigconf-lualatex: A proceedings paper in the sigconf format, Lua \TeX version.

sample-sigplan: A proceedings paper in the sigplan format.

sample-acmsmall-conf: A proceedings paper in the acmsmall format for the publication in a journal using this option.

sample-acmtog-conf: A proceedings paper in the acmtog format for the publication in a journal using this option.

sample-acmcp: A sample of ACM Cover Page used by JDS.

sample-acmengage: A sample of ACM Engage publication.

2.22 A note about sigchi-a format

Starting in Spring 2020 ACM retired SIGCHI Extended Abstract format (sigchi-a). ACM will not, under any circumstances, accept documents in this format for publication and will not offer technical support to the authors who use this template.

You may use this format in the nonacm mode only, as in

```
\documentclass[sigchi-a, nonacm]{acmart}
```

`sidebar` (*env.*) This format has large margin uses for special figures and tables. This package provides three environments for this with optional captions:
`marginfigure` (*env.*)
`margintable` (*env.*)

sidebar: textual information in the margin,

marginfigure: a figure in the margin,

margintable: a table in the margin.

The environments `figure` and `table` produce figures and tables with the width of the text column. The environments `figure*` and `table*` produce “wide” figures and tables, which take a large part of the margin.

The horizontal sizes of figures are:

1. `figure`: `\columnwidth`,
2. `marginfigure`: `\marginparwidth`,
3. `figure*`: `\fulltextwidth`.

2.23 Experiments with tagging

ACM is firmly committed to produce fully tagged PDFs compliant with the accessibility standards. We use the developmental version of tagging code by \TeX 3 team, see the details at <https://www.latex-project.org/publications/indexbytopic/pdf/> and <https://tug.org/twg/accessibility/overview.html>.

At present this work is highly experimental. You may try the experiments by (1) using the class `acmart-tagged` in the document class line, and (2) adding the command `\DocumentMetadata[options]` in the preamble, see the file `sample-acmsmall-tagged.tex`. If you do this, please *do not ask ACM for support*. On the other hand, bug reports at <https://github.com/borisveytsman/acmart/issues> will be appreciated.

3 Implementation

3.1 Identification

We start with a declaration of who we are. Most .dtx files put driver code in a separate .drv driver file. We roll this code into the main file and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{acmart.dtx}
4 </gobble>
5 <class&!tagged>\ProvidesClass{acmart}
6 <tagged>\ProvidesClass{acmart-tagged}
7 [2024/12/07 v2.11 Typesetting articles for the Association for Computing Machinery]
```

And the driver code:

```
8 <*gobble>
9 \documentclass{ltxdoc}
10 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
11 \usepackage[tt=false, type1=true]{libertine}
12 \usepackage[varqu]{zi4}
13 \usepackage[libertine]{newtxmath}
14 \usepackage[tableposition=top]{caption}
15 \usepackage{hypdoc}
16 \PageIndex
17 \CodeLineIndex
18 \RecordChanges
19 \EnableCrossrefs
20 \begin{document}
21   \DocInput{acmart.dtx}
22 \end{document}
23 </gobble>
24 <*class>
25 <!tagged>\def\@classname{acmart}
26 <tagged>\def\@classname{acmart-tagged}
```

3.2 Preload hook

We preload acmart-preload-hook:

```
27 \InputIfFileExists{acmart-preload-hook.tex}{%
28   \ClassWarning{\@classname}{%
29     I am loading acmart-preload-hook.tex. You are fully responsible
30     for any problems from now on.}}{}
```

3.3 Options

We need xkeyval since some of our options may have values:

```
31 \RequirePackage{xkeyval}
   We use xstring to check whether user input is valid
32 \RequirePackage{xstring}
   We need iftex to check the engine
33 \RequirePackage{iftex}
```

format The possible formats

```
34 \define@choicekey*+{\@classname.cls}{format}[\ACM@format\ACM@format@nr]{%
35 manuscript, acmsmall, acmlarge, acmtog, sigconf, siggraph,
36 sigplan, sigchi, sigchi-a, acmengage, acmcp}[manuscript]{}{%
37 \ClassError{\@classname}{The option format must be manuscript,
38 acmsmall, acmlarge, acmtog, sigconf, siggraph,
39 sigplan, sigchi or sigchi-a}}
40 \def\DeclareACMFormat#1{\DeclareOptionX{#1}{\setkeys{\@classname.cls}{format=#1}}}
41 \@DeclareACMFormat{manuscript}
42 \@DeclareACMFormat{acmsmall}

```

3.4 Setting switches

`\if@ACM@manuscript` Whether we use manuscript mode

```
164 \newif\if@ACM@manuscript
```

`\if@ACM@journal` There are two kinds of publications: journals and books

```
165 \newif\if@ACM@journal
```

`\if@ACM@journal@bibstrip` Sometimes ACM wants a journal-like publication to have conference information in the bibstrip and vice versa, so we have an additional switch.

```
166 \newif\if@ACM@journal@bibstrip
```

`\if@ACM@journal@bibstrip@or@tog` ACM TOG sometimes uses journal-like bibstrip even for conference proceedings, so we need to set it separately

```
167 \newif\if@ACM@journal@bibstrip@or@tog
```

`\if@ACM@sigchiamode` The formatting of SIGCHI extended abstracts is quite unusual. We have a special switch for them.

```
168 \newif\if@ACM@sigchiamode
```

`\if@ACM@engage` ACM Engage course materials have special formatting

```
169 \newif\if@ACM@engage
```

```
170 \@ACM@engagefalse
```

`\if@ACM@acmcp` ACM cover page formatting

```
171 \newif\if@ACM@acmcp
```

```
172 \@ACM@acmcpfalse
```

Setting up switches

```
173 \ifnum\ACM@format@nr=5\relax % siggraph
```

```
174 \ClassWarning{\@classname}{%
```

```
175 The format siggraph is now obsolete.\MessageBreak
```

```
176 I am switching to sigconf.}
```

```
177 \setkeys{\@classname.cls}{format=sigconf}
```

```
178 \fi
```

```
179 \ifnum\ACM@format@nr=7\relax % sigchi
```

```
180 \ClassWarning{\@classname}{%
```

```
181 The format sigchi is now obsolete.\MessageBreak
```

```
182 I am switching to sigconf.}
```

```
183 \setkeys{\@classname.cls}{format=sigconf}
```

```
184 \fi
```

```
185 \ifnum\ACM@format@nr=8\relax % sigchi
```

```
186 \ClassWarning{\@classname}{%
```

```

```

`\normalparindent` The `amsart` package defines the `\normalparindent` length and initializes it to 12pt (the value of `\parindent` in `amsart`). It is later used to set the `\listparindent` length in the quotation environment and the `\parindent` length in the `\@footnotetext` command. We set `\normalparindent` to the value of `\parindent` as selected by `acmart` for consistent paragraph indents.

```
795 \setlength\normalparindent{\parindent}
```

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for the bibstrip. In the old ACM classes, the bibstrip was a `\@float`. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use `manyfoot` for layered footnotes instead.

`copyrightpermissionfootnoterule` This is the footnote rule that separates the bibstrip from the rest of the paper. It is a full width rule.

```

796 \def\copyrightpermissionfootnoterule{\kern-3\p@
797 \hrule \@width \columnwidth \kern 2.6\p@}

798 \RequirePackage{manyfoot}
799 \SelectFootnoteRule[2]{copyrightpermission}
800 \DeclareNewFootnote{authorsaddresses}
801 \SelectFootnoteRule[2]{copyrightpermission}
802 \DeclareNewFootnote{copyrightpermission}

```

`\footnoterule` Tschichold’s rules:

```

803 \def\footnoterule{\kern-3\p@
804 \hrule \@width 4pc \kern 2.6\p@}

```

`\endminipage` We do not use footnote rules in `minipages`

```

805 \def\endminipage{%
806 \par
807 \unskip
808 \ifvoid\@mpfootins\else
809 \vskip\skip\@mpfootins

```

The AMS uses generous margins for lists. Note that `amsart` defines `\leftmargin` values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that `amsart` redefines the `enumerate` and `itemize` environments with a `\makeLabel` command that uses `\llap`, so the `\labelwidth` value is (effectively) irrelevant; nonetheless, we follow `amsart` and set `\labelwidth` to `\leftmargin` minus `\labelsep`.

```

```

`\num@authorgroups` The total number of “groups”. Each group is several authors with the same affiliations(s)
 1572 `\newcount\num@authorgroups`
 1573 `\num@authorgroups=0\relax`

`\num@author` The total number of authors
 1574 `\newcount\num@author`
 1575 `\num@author=0\relax`

`\if@insideauthorgroup` Whether we are continuing an author group
 1576 `\newif\if@insideauthorgroup`
 1577 `\@insideauthorgroupfalse`

`\author` Adding an author to the list of authors and addresses.

Note that we want to typeset the link to the author’s orcid if known. The problem is, we know the orcid only after the author is entered. The trick is based on the idea that `\csname... \endcsname` is `\relax` unless defined. Therefore we typeset authors by the special macro `\csname typeset@author\the\num@author\endcsname`, which is defined by `\orcid` command.

```

```

3.21 Typesetting top matter

`\mktitle@bx` Some of our formats use a two-column design. Some use a one-column design. In all cases we use a wide title. Thus we typeset the top matter in a special box to be used in the construction `\twocolumn[⟨box⟩]`.

```
2182 \newbox\mktitle@bx
```

`\maketitle` The (in)famous `\maketitle`. Note that in `sigchi-a` mode, authors are *not* in the title box.

Another note: there is a subtle difference between author notes, title notes and thanks. The latter two refer to the paper itself and therefore belong to the copyright/permission block. By the way, this was the default behavior of the old ACM classes.

```

\@printtopmatter The printing of top matter starts a new page and uses the given title box.

Note that if there are too many authors, \mktitle@bx might overflow the page. Therefore we start with checking this and if this happens, we split the box and print it page by page.

```

```

`\@ACM@addtoaddress` This macro adds an item to the address using the following rules:

1. If we start a paragraph, add the item
2. Otherwise, add a comma and the item
3. However, the comma is deleted if it is at the end of a line. We use the magic `\cleaders` trick for this.

```
2550 \newbox\@ACM@commabox
2551 \def\@ACM@addtoaddress#1{%
2552   \ifvmode\else

2555       \unskip\cleaders\copy\@ACM@commabox\hskip\wd\@ACM@commabox
2556     \fi\fi
2557   #1}
```

`\institution` Theoretically we can define the macros for `\affiliation` inside the `\mkauthors`-style `\position` commands. However, this would lead to a strange error if an author uses them outside `\department` `\affiliation`. Of course we can make them produce an error message, but...

3.23 Sectioning

\ACM@NRadjust Ross Moore's macro.

Initially \ACM@sect@format@ just passes through its #1 argument unchanged. When a sectioning macro such as \section occurs, the \ACM@NRadjust redefines \ACM@sect@format@ to expand into the styling commands; e.g., \@secfont. Then \Sectionformat is temporarily redefined to produce \realSectionformat{\ACM@sect@format{#1}}{#2}, which ultimately becomes \Sectionformat{\@secfont{#1}}{#2}. This is done to allow \Sectionformat to be variable, as may be needed in particular circumstances. Its current expansion is saved as \realSectionformat which is used with the modified 1st argument, then \Sectionformat is reverted to its former expansion.

To style the section-number, the line #1{} is used at the end of \ACM@NRadjust. This imposes style-changing commands for fonts and sizes, but any \MakeUppercase acts on just the {}. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in \@adddotafter being called too soon, so a slight adjustment is made, via \ACM@adddotafter, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched \@adddotafter.

```

3.24 TOC lists

\@dotsep Related to the \tableofcontents are all the horizontal fillers. Base \LaTeX defines \@dottedtocline, which we should not disable. Yet, this command expects \@dotsep to be defined but leaves this to the class implementation. Since amasart does not provide this, we copy the standard variant from article here.

Make acmplain the default theorem style.

```

3419 \theoremstyle{acmplain}

```

Delay defining the theorem environments until after other packages have been loaded. In particular, the `cleveref` package must be loaded before the theorem environments are defined in order to show the correct environment name (see <https://github.com/borisveytsman/acmart/issues/138>). The `acmthm` option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by the user or by user-loaded packages, we only define environments that have not yet been defined.

```

```

3.27 Acknowledgments

\acksname

```
3529 \newcommand\acksname{Acknowledgments}
```

`\acks` This is a comment-like structure

```
3530 \specialcomment{acks}{%
3531   \begingroup
3532   \section*{\acksname}
3533   \phantomsection\addcontentsline{toc}{section}{\acksname}
3534 }{%
3535   \endgroup
3536 }
```

`\grantsponsor` We just typeset the name of the sponsor

```
3537 \def\grantsponsor#1#2#3{#2}
```

`\grantnum`

```
3538 \newcommand\grantnum[3][][#3%
3539   \def\@tempa{#1}\ifx\@tempa\@empty\else\space(\url{#1})\fi}
```

3.28 Conditional typesetting

We use the `comment` package for conditional typesetting:

```
3540 \AtEndPreamble{%
3541   \if@ACM@screen
3542   \includecomment{screenonly}
3543   \excludecomment{printonly}
3544 \else
3545   \excludecomment{screenonly}
3546   \includecomment{printonly}
3547 \fi
3548 \if@ACM@anonymous
3549   \excludecomment{anonsuppress}
3550   \excludecomment{acks}
3551 \else
3552   \includecomment{anonsuppress}
3553 \fi}
```

3.29 Additional bibliography commands

`\showeprint` The command `\showeprint` has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’.

```
3554 \newcommand\showeprint[2][arxiv]{%
3555   \def\@tempa{#1}%
3556   \ifx\@tempa\@empty\def\@tempa{arxiv}\fi
3557   \def\@tempb{arxiv}%
3558   \ifx\@tempa\@tempb\relax
3559     arXiv:\href{https://arxiv.org/abs/#2}{#2}%
3560   \else
3561     \def\@tempb{arXiv}%
3562     \ifx\@tempa\@tempb\relax
3563       arXiv:\href{https://arxiv.org/abs/#2}{#2}%
3564     \else
3565       #1:#2%
3566     \fi
3567   \fi}
```

3.30 Index

`\theindex` Standard amsart uses plain page style in index pages. This clashes with line numbering for review option, so we redefine it.

```
3568 \def\theindex{\@restonecoltrue\if@twocolumn\@restonecolfalse\fi
3569 \columnseprule\z@ \columnsep 35\p@
3570 \@indextitlestyle
3571 \let\item\idxitem
3572 \parindent\z@ \parskip\z@\@plus.3\p@\relax
3573 \raggedright
3574 \hyphenpenalty\@M
3575 \footnotesize}
```

3.31 End of Class

`\vspace` We do not disable `\vspace`, but add warning to it

```
3576 \let\@vspace@orig=\@vspace
3577 \let\@vspacer@orig=\@vspacer
3578 \apptocmd{\@vspace}{\ClassWarning{\@classname}{\string\vspace\space should
3579 only be used to provide space above/below surrounding
3580 objects}}{}}
3581 \apptocmd{\@vspacer}{\ClassWarning{\@classname}{\string\vspace\space should
3582 only be used to provide space above/below surrounding
3583 objects}}{}}
3584 \let\@vspace@acm=\@vspace
3585 \let\@vspacer@acm=\@vspacer
```

`\ACM@origbaselinestretch` We produce an error if the user tries to change `\baselinestretch`

```
3586 \let\ACM@origbaselinestretch\baselinestretch
3587 \AtEndDocument{\ifx\baselinestretch\ACM@origbaselinestretch\else
3588 \ClassError{\@classname}{An attempt to redefine
3589 \string\baselinestretch\space detected. Please do not do this for
3590 ACM submissions!}\fi}

3591 \normalsize\normalfont\frenchspacing
3592 </class>
```

Change History

1.48	General: Added prologue option to xcolor	50	\ccsdesc@parse: Added warning for missing concepts	78
	Bib code cleanup (Zack Weinberg)	35	\if@ACM@printacmref: Added warning for longer papers	76
	Documentation update (siggraph)	35	\keywords: Added warning for missing keywords	75
1.49	General: New journal: DTRAP	35	1.69	\vspace: Added the changed command to avoid grouping
1.53	General: New journals: PACMCGIT, TIOT, TDSCI	35	1.70	General: Name change for TDS
	Rearranged docs	35	1.71	General: Bibliography change: volume for @inproceedings is now in brackets together with series
1.54	General: Moved footnote stuff before hyperref call (Ross Moore)	35	1.75	LuaTeX now uses the OTF versions of fonts
1.56	General: Documented \Description	35		Retired sigchi and sigchi-a
1.57	General: Booktabs package is now the default	35	1.78	General: Documentation update
1.58	General: Changes in samples (Enrico Gregorio)	35	1.79	General: Documentation update: Word count
	New journal: HEALTH. TDS is renamed to TDSCI	35	1.80	General: Updated indormation for TAP, TCPS, TEAC
1.60	General: New option: urlbreakonhyphens	35	1.82	General: Added DLT and FAC
	\if@ACM@urlbreakonhyphens: introduced macro	36	1.84	General: Updated abbreviations and codes for several journals
1.62	General: New journal: TELO	35	1.85	General: New journals: JDS, GAMES
1.63	General: New journal: FACMP	35		General: Added CC licenses
	New journal: TQUANT	35		Added: acmengage
1.63a	General: Move: TQUANT to TQC	35		New journal: JRC
1.64	General: Putting abstract after \maketitle now causes an error	35		\@mkauthors: Added: acmengage
1.65	General: New journal: DGOV	35		\@mktitle: Added: acmengage
1.66	General: ACM reference format is now mandatory for papers over one page; CCS concepts and keywords are now mandatory for papers over two pages	35		\@printtopmatter: Added: acmengage
	Authors' addresses are mandatory for journal articles	35		\@specialsection: Added: acmengage
	\@mkauthorsaddresses: Added warning for missing addresses	99		\@subtitlefont: Added: acmengage
				\@titlefont: Added: acmengage
				\ACM@linecountR: Added: acmengage
				format: New format: acmengage
				\parskip: Added: acmengage

1.87	General: New journals: ACMJCSS, JATS, TORS	60	v1.02	General: Added TOPS and TSC (closes https: //github.com/borisveytsman/ acmart/issues/12)	35
	format: New format: acmcp	36		Documentation changes (closes https: //github.com/borisveytsman/ acmart/issues/13)	35
1.88	General: Added ISSN for ACMJCSS	60			
	Added ISSN for GAMES	60			
	Added PACMNET	60			
1.89	General: Added PACMMOD	60	v1.03	General: Added anonsuppress environment	35
	Added TOPML	60		Added authorversion option (closes https: //github.com/borisveytsman/ acmart/issues/9)	35
	\@printtopmatter: Moved badges to top header	89		\@formatdoi: Added macro	81
1.90	General: Added TOPML eISSN	60		\if@ACM@authorversion: Added macro	37
1.90a	General: Changes in the sample keywords and concepts	35		\maketitle: Added special case of authorversion	85
1.92	General: Documentation update: use of 'anonymous' throughout	35	v1.04	General: Updated bibliography for siggraph	35
	Moved hyperxmp again due to kernel update	49		\acmArticleSeq: Name change by Matthew Fluet	73
2.04	General: Deleted loading ifdraft due to the new release of hyperxmp	49		\acmDOI: Name change by Matthew Fluet	74
	Explicitly load ifdraft since hyperxmp tries to load it inside a group	49		\acmISBN: Name change by Matthew Fluet	74
2.05	General: New data for TELO	60	v1.05	General: Added processing doi numbers for acmsiggraph and doi numbers for sigproc.bib	35
2.06	General: Added eISSN for a number of journals	60		Patched \setcitestyle command; closes https: //github.com/borisveytsman/ acmart/issues/19	35
2.07	General: Another change for TELO	60	v1.06	\@ACM@badge@skip: Added macro	74
v1.00	General: First released version	35		\@ACM@badge@width: Added macro	74
v1.01	General: Changed hyperref colors in screen mode (closes https: //github.com/borisveytsman/ acmart/issues/1)	35		\@ACM@title@width: Added macro	74
	Defined ACM colors	35		\@mktitle@i: Added processing badges	91
	Explicitly put draft option (closes https: //github.com/borisveytsman/ acmart/issues/4)	38		Made generic	91
	Set headheight to 1pc for all formats (closes https: //github.com/borisveytsman/ acmart/issues/5)	35		\@mktitle@ii: Now this macro is obsolete	92
				\@mktitle@iii: Added processing badges	92
				Made more generic	92
				\@mktitle@iv: Made more generic	92
				\@printtopmatter: Added processing badges	89
				\@subtitlefont: Added macro	91

\@titlefont: Added macro	90	Increased font size for ACM Large	40
\acmBadgeL: Added macro	74	Print bibliographic information by default for the proceedings	76
\acmBadgeR: Added macro	74	\@mpfootnotetext: Made minipage footnotes centered	49
\if@ACM@badge: Added macro	74	\bibliographystyle: Redefined macro	50
v1.07		\bibstyle@acmauthoryear: Added macro	43
\maketitle: Corrected a bug with abstract footnotes	85	\bibstyle@acmnumeric: Added macro	44
Corrected a bug with permission and footnotes order	85	\if@ACM@printfolios: Added macro	76
v1.08		standardpagestyle: Added headers for sigs	103
General: SIGPLAN reformatting by Matthew Fluet	35	Expanded headers for sigchi-a	103
Typos corrected (Tobias Pape)	35	Suppressed folios if sig	103
v1.09		v1.14	
General: Revert SIGPLAN caption rules	35	General: \citestyle updates (Matthew Fluet)	35
v1.10		Patched \citestyle	42
General: Changes of ‘licensedothergov’ wording	79	\bibstyle@acmauthoryear: Moved def of \bibstyle@acmauthoryear before use	43
\maketitle: Corrected a bug with doi in manuscript and author version, https://github.com/borisveytsman/acmart/issues/36	85	\bibstyle@acmnumeric: Moved def of \bibstyle@numeric before use	44
standardpagestyle: Reversed folios location	103	v1.15	
v1.11		\@ACM@addtoaddress: Added macro	92
General: Customization of ACM theorem styles and proof environment by Matthew Fluet	35	\@mkauthors@iii: New authors system	96
v1.12		\@shortauthors: Introduced macro	103
General: Added graceful behavior when libertine fonts are absent	54	\@typeset@author@bx: Moved to separate macro	96
Documentation updates	35	\acks: Added macro	115
\@marginfigure: Now centering by default	57	\affiliation: Added code for author groups	71
\@marginfigure: Now centering by default	57	\author: Added code for author groups	70
\@parfont: Moved to \section@raggedright	109	\city: Added macro	92
\copyrightpermissionfootnoterule: Added macro	53	\country: Added macro	92
\descriptionlabel: Redefined	60	\department: Added macro	92
\footnoterule: Made shorter	53	\grantnum: Added macro	115
\if@ACM@natbib@override: Added macro	37	\grantsponsor: Added macro	115
\if@ACM@newfonts: Added macro	54	\if@insideauthorgroup: Introduced macro	70
\maketitle: Moved thankses to copyrightpermission box	85	\institution: Added macro	92
\section@raggedright: Introduced macro	109	\num@authorgroups: Renamed	70
v1.13		\orcid: Introduced macro	71
General: Font adjustments for acmsmall	94	\position: Added macro	92
		\postcode: Added macro	92
		\state: Added macro	92
		\streetaddress: Added macro	92
		standardpagestyle: Better handling of anonymous mode	103

v1.16	General: Formatting header/footer (Matthew Fluet)	35	v1.21	\showeprint: Added macro	115
	\@headfootfont: Added macro	103	v1.22	General: More bibliography changes for Aptara	35
	standardpagestyle: Customize header/footer text font	103	v1.23	General: Add PACMPL journal option	35
v1.17	General: Slightly decreased margins for sigs	51	v1.24	General: Add IMWUT journal option	60
	\@makefnmark: Redefined	49	v1.25	General: Updated PACMPL	60
	\@mkauthors: TOG now uses the same authors block as other journals . . .	93	v1.26	General: Corrected \shortcite bug .	35
	\@mkauthors@ii: Deleted	96		Documentation typos fixed (thanks to Stephen Spencer)	35
	\@mkbibcitation: Added \nobreak Changed format for sigs	100	v1.27	\if@ACM@printccs: Typo corrected .	75
	\acmArticle: The default is now numerical	73	v1.28	General: Corrected option natbib behavior	44
	\acmMonth: The default must be numerical. Closes #50.	73		Got rid of warnings in pdf keywords	49
	\acmNumber: The default is now numerical	73	\ccsdesc@parse: Change from \to to \textrightarrow (Matteo Riondato)	78	
	\acmVolume: The default is now numerical	73	v1.29	General: Increased head to 13pt	51
	\acmYear: The default is now numerical	73	\@mkabstract: Removed spurious indentation (John Wickerson) . . .	99	
	\description: Decreased indent . . .	60	\ccsdesc@parse: Add spacing after bullet and around rightarrow; semicolon separators no longer in bold/italic (John Wickerson)	78	
	\grantnum: Added url	115	standardpagestyle: Corrected printfolios (Matthew Fluet)	103	
	\grantsponsor: Renamed	115	v1.30	General: Added \frenchspacing . . .	116
	\if@ACM@printacmref: Renamed from \if@ACM@printbib	75		Bibtex style now recognizes https:// in doi	35
	standardpagestyle: Added paper title to sigs	103		Switched to T1: looks like libertine has problems with \l in OT1	55
v1.18	General: Natbib is now the default for all formats	35		Updated IMWUT and PACMPL . . .	60
	\@mkauthors@i: Now we andify affiliations	95	\department: Added optional parameter	92	
	\@typeset@author@line: Added macro	94	v1.31	General: Documentation changes . . .	35
v1.19	General: Include 'Abstract', 'Acknowledgements', and 'References' in PDF bookmarks (Matthew Fluet)	35	\@additionalaffiliation: Added macro	71	
	Include 'References' in PDF bookmarks (Matthew Fluet)	42	\@mkbibcitation: Disabled linebreak	100	
	\@mkabstract: Include 'Abstract' in PDF bookmarks (Matthew Fluet) . . .	99	\@startsection: Added \tochangmeasure	46	
	\acks: Include 'Acknowledgements' in PDF bookmarks (Matthew Fluet) . . .	115	\@starttoc: Redefined macro	48	
v1.20	General: Bug fixes for bst	35	\@textbottom: Redefined	54	
	\@mkabstract: Deleted spurious space	99	\acmMonth: The default now is the current month (Matteo Riondato)	73	

\acmYear: The default now is the current year (Matteo Riondato) . . .	73	\institution: Added	
\additionalaffiliation: Added macro	71	obeypunctuation code	92
\l@section: Redefined macro . . .	48	firstpagestyle: Added right	
\l@subsection: Redefined macro . . .	48	linecount for two-column formats	105
v1.32		Added timestamp (Michael D. Adams)	105
General: Added POMACS journal option	35	\maketitle: Fixed the bug with figures on top and bottom of the title page, thanks to David Epstein	85
Format siggraph is now obsolete . . .	35	\position: Added obeypunctuation code	92
\@formatdoi: New doi format	81	\postcode: Added obeypunctuation code	92
v1.33		\state: Added obeypunctuation code	92
General: Added acmart-preload-hook	35	\streetaddress: Added obeypunctuation code	92
Added cmap and glyphtounicode . . .	54	standardpagestyle: Added right	
BibTeX comma before articleno bug corrected	35	linecount for two-column formats	103
BibTeX crossref bug corrected	35	Added timestamp (Michael D. Adams)	103
BibTeX numpages bug corrected	35	v1.34	
Documentation updates	35	\@mkbibcitation: Deleted DOI from doi numbers	100
Moved \citename definition for non-natbib bibliography, so a package may redefine it	50	\ACM@linecount@bx: Rulers now are continuous	101
Switched to Type 1 fonts for libertine even if OTF-capable engine is used (Kai Mindermann) . . .	55	\ACM@linecountL: Rulers now are continuous	102
\@ACM@addtoaddress: Added obeypunctuation code	92	\ACM@linecountR: Rulers now are continuous	102
\@mkauthors@i: Added obeypunctuation code	95	\maketitle: Added date to the bibstrip in conf proceedings	85
\@mkauthors@iii: Added obeypunctuation code	96	Deleted ‘DOI’ from doi numbers	85
\@mkauthors@iv: Added obeypunctuation code	97	Rearranged bibstrip	85
\@subtitlefont: Added \normalsize	91	The \terms command is now obsolete	85
\ACM@linecountL: Renamed macro . . .	102	\terms: The \terms command now just produces a warning	75
\ACM@linecountR: Added macro	102	v1.35	
\ACM@timestamp: Added current page number	102	General: BibTeX bug fixed: et al.	35
Added macro (Michael D. Adams)	102	If the copyright is set to usgov or rigtsretained, the price is suppressed	79
\acmSubmissionID: Added macro	73	\bibstyle@acmauthoryear: Square brackets for author-year style	43
\city: Added obeypunctuation code . . .	92	v1.36	
\country: Added obeypunctuation code	92	General: Added PACMHCI journal options	60
\department: Added obeypunctuation code	92	Added the possibility to adjust number of author boxes per row in conference formats	35
\if@ACM@affiliation@obeypunctuation: Added macro	71	\@ACM@authorsperrow: Added macro	76
\if@ACM@authordraft: Added macro	38	\@mkauthors@iii: Added authorsperrow override	96
\if@ACM@natbib@override: Deleted macro	37		
\if@ACM@timestamp: Added macro (Michael D. Adams)	38		

\@mkauthors@iv: Added		\streetaddress: We now do not	
authorsperrow override	97	print this even in SIG	92
\if@ACM@authordraft: Corrected		v1.41	
typo, thanks to bargteil	38	General: Added new badges	35
v1.37		v1.42	
General: Reduce list indentation		General: Deleted ACM badges	35
(Matthew Fluet)	59	v1.43	
Set \normalparindent; Reduce list		\@starttoc: Added \makeatletter	48
indentation (Matthew Fluet)	35	\country: Added comma before	
\description: Reduce list		country for journals	92
indentation (Matthew Fluet)	60	v1.44

colors in boxes do not work	101	\bfeseries\sffamily to	
\ccdesc@parse@finish: Added		\sffamily\bfseries	90
macro	78	v1.46	
\city: We now do not print this even		General: Added etoolbox	35
in SIG	92	Bst file bug fixes: label width is	
\country: Fixed bugs with extra		calculated correctly	35
spaces	92	Delayed hypersetup since journal	
\l@section: Redefined macro	48	options may change screen mode	49
\postcode: We now do not print this		PACM now set screen to true	60
even in SIG	92	Restore theorem defs to class file	35
\state: We now do not print this even		\@mkauthorsaddresses: Introduced	
in SIG	92	macro	98
		\@mkbibcitation: Added subtitle	100

<code>\@printendtopmatter</code> : Made it	v1.51	General: Corrected the bug with price suppression	79
<code>\par\bigskip</code> uniformly	100	Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g	79
<code>\@printtopmatter</code> : Deleted rule	89	XeTeX now uses OTF fonts (Joachim Breitner)	55
<code>\@setauthorsaddresses</code> : Introduced macro	101	<code>firstpagestyle</code> : We now use journal abbreviation for footers	105
<code>\ACM@linecount@bx</code> : Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm)	101	<code>standardpagestyle</code> : We now use journal abbreviation for footers	103
<code>\author</code> : Started counting authors	70	v1.52	
<code>\authorsaddresses</code> : Introduced macro	72	<code>\@copyrightowner</code> : Rewording of licenses	80
<code>\country</code> : Corrected spacing for institution	92	<code>\@copyrightpermission</code> : Another rewording of copyright statements for iw3c2w3[g]	81
<code>\if@ACM@acmthm</code> : Modified description	36	v1.53	
<code>\liningnums</code> : Workaround for compatibility with fontspec	55	General: Added PACMCGIT, TIOT, TDSCI	60
<code>\maketitle</code> : Added authors' addresses	85	v1.54	
Thankses go before authors' addresses	85	General: Added Ross's patch for sectioning	108
<code>\num@authors</code> : Introduced macro	70	Deleted indent for subsection	108
v1.47		XeTeX now uses T1 encoding	55
General: New journal: THRI	35	<code>\@mkbibcitation</code> : Bug corrected (Ross Moore)	100
v1.48		<code>\@shortauthors</code> : Added submission id in anonymous mode	103
General: <code>\citeyear</code> no longer behaves like <code>\citeyearpar</code>	50	<code>\ACM@adddotafter</code> : Added macro	108
Code prettying (Michael D. Adams)	35	<code>\ACM@NR@adjustedSectionformat</code> : Added macro	108
Initial support for Biblatex (Daniel Thomas)	35	<code>\ACM@NRadjust</code> : Added macro	107
Misc entries in the bibliography no longer produce a separate date	35	<code>\author</code> : Added submission id in anonymous mode	70
Typos fixed (Jamie Davis)	35	<code>\if@ACM@nonacm</code> : Added macro	37
<code>\@headfootfont</code> : Deleted unnecessary switch (Michael D. Adams)	103	v1.55	
<code>\@mkabstract</code> : Removed spurious indentation if abstract is followed by an empty line	99	General: Now we use purple color for links	49
<code>\ACM@timestamp</code> : Formatting change (Michael D. Adams)	102	Table captions for SIGCHI now use the same font size as figure captions (Luis Leiva)	56
<code>\if@ACM@review</code> : Review mode now switches on folios	36	Typo corrected (Zack Weinberg)	42
<code>\maketitle</code> : Added acmart and version info to pdfcreator tag	85	<code>\@mkbibcitation</code> : Bug corrected	100
Added language and doctitle attributes to PDF (Andreas Reichinger)	85	<code>\maketitle</code> : Fixes topnum	85
Suppressed empty DOI (Serguei Mokhov)	85	v1.56	
v1.50		General: Looks like XeTeX requires explicit monotype font declaration	55
<code>\@copyrightpermission</code> : New copyright statements for iw3c2w3[g]	81	Make two-column layouts flush (Philip Quinn)	51
		<code>\@marginfigure</code> : Added checking for description	57
		<code>\@mkteasers</code> : Added check for description	99

\acksname: Added macro (Philip Quinn)	114	standardpagestyle: Added logic for conference papers using journal format	103
\ccsdesc@parse: End the concepts list with a period (Philip Quinn)	78	Moved page styles to \AtBeginDocument	103
\Description: Added macro	56	v1.60	
\if@Description@present: Added macro	55	\@headfootfont: Moved to footnotesize	103
\if@undescribed@images: Added macro	55	v1.61	
v1.57		\@typeset@author@bx: Added \normalbaselines	96
\ACM@origbaselinestretch: Added check whether the user changed \baselinestretch	116	v1.64	
\author: Added warning if \author has comma	70	\ACM@linecount@bx: Bug fix: made the spacing on the left and the right size equal	101
\email: Added warning if \author has comma	71	\if@ACM@maketitle@typeset: Introduced macro	60
\if@ACM@balance: Added macro	37	\maketitle: Added a switch setting to show that \maketitle is typeset	85
\vspace: Added warning	116	v1.65	
v1.58		\@mkauthorsaddresses: Deleted cs@addpunct	98
General: Added HEALTH. TDS CI is renamed to TDS	60	v1.66	
Suppressed \addtocounter in pdf subject	49	General: Patching algorithm and algorithm* to prevent spurious space warnings	56
\dblfloat: Deleted spurious \vspace warning	58	\@specialsection: Suppress warnings about \vspace	88
\@marginfigure: Deleted spurious \vspace warning	57	v1.67	
\@margintable: Deleted spurious \vspace warning	58	General: Patching lstlisting and lstlisting* to prevent spurious space warnings	56
\@mkbibcitation: Deleted spurious \vspace warning	100	\@parfont: Deleted redefinitions of sections	109
\@printendtopmatter: Deleted spurious \vspace warning	100	\@specialsection: Paragraph inside group does not print its argument. Added a bugfix	88
\@sidebar: Deleted spurious \vspace warning	57	v1.68	
\maketitle: Original \vspace inside \maketitle	85	General: New command for unindent paras	108
\vspace: Preserved old versions as \@vspace@orig and \@vspace@orig	116	\@specialsection: Deleted grouping altogether	88
v1.59		v1.69	
\acmConference: Setting \@ACM@journal@bibstrip	69	General: No dots for unindented paragraphs	108
\acmJournal: Setting \@ACM@journal@bibstrip	68	\@printendtopmatter: Deleted grouping	100
\if@ACM@journal@bibstrip: Introduced macro	39	\@specialsection: Changed dot to colon for sigplan	88
firstpagestyle: Added logic for conference papers using journal format	105	\ACM@linecountR: Do not increase numbers in one column format	102
Moved page styles to \AtBeginDocument	105	\ccsdesc@parse: Use math right arrow in text	78

v1.71		\orcid: Added code for orcid links . . .	71
	\l@subsubsection: Bug fixed (thanks to Andrew Black)	standardpagestyle: Fixed bug with no line numbers for nonacm	103
v1.72		v1.77	
	\author: Added \detokenize (Kuldeep S. Meel)	\@mkauthorsaddresses: New separator of institutions	98
	\maketitle: Do not andify authors for pdf metadata (Scott Pakin)	v1.78	
v1.73		\@mkauthors@i: Unboxing \mktitle@bx	95
	General: Patching minted and minted* to prevent spurious space warnings	\@mkauthors@iii: Unboxing \mktitle@bx	96
	\@ACM@checkaffil: Added macro	\@mkteasers: Unboxing \mktitle@bx	99
	\@ACM@resetaffil: Added macro	\@printtopmatter: Added processing the overflowing title box	89
	\@mkauthors@i: Check the presence of required elements for affiliations	\@specialsection: Again suppressed \vspace warning	88
	\@mkauthors@iii: Check the presence of required elements for affiliations	v1.82	
	\@mkauthors@iv: Check the presence of required elements for affiliations	\anon: Introduced macro	84
	\city: Check the presence in affil	v1.83	
	\country: Check the presence in affil	General: Use babel for multilanguage papers	44
	\if@ACM@citypresent: Added macro	\@mkabstract:I13n	99
	\if@ACM@countrypresent: Added macro	\@mktitle@i: Added \translatedtitle and \translatedsubtitle	91
	\if@ACM@instpresent: Added macro	\@mktitle@iii: Added \translatedtitle and \translatedsubtitle	92
	\institution: Check the presence in affil	\@mktitle@iv: Added \translatedtitle and \translatedsubtitle	92
	\maketitle: Do not check again the presence of address fields	\@mktranslatedabstract: Added macro	100
v1.74		\@mktranslatedkeywords: Added macro	72
	General: Changed the order of font loading	\@translatedabstracts: Added macro	45
v1.75		\@translatedkeywords: Added macro	45
	\@ACM@checkaffil: Changed warning to error for country	\@translatedsubtitle: Added macro	45
	\@beginmaketitlehook: Introduced macro	\@translatedtitle: Added macro	45
	\AtBeginMaketitle: Introduced macro	\ACM@lang@check: Added macro	45
	\maketitle: Added \@beginmaketitlehook	\ACM@languages: Introduced macro	38
v1.76		\maketitle:I13n	85
	General: Moved hyperxmp before hyperref, see https://github.com/borisvevtsman/acmart/issues/425	translatedabstract: Added macro	45
	\author: Added code for orcid links	\translatedkeywords: Added macro	45
	\if@ACM@pbalance: Added macro	\translatedsubtitle: Added macro	45
	\maketitle: Put \par inside group for keywords	\translatedtitle: Added macro	45
		v1.85	
		General: Added CC licenses	79
		\@acmengagemetadata: Introduced macro	84

\@copyrightowner: Added CC licenses	80	\@ACM@color@frame: Added saving the position of the bottom	77
\@copyrightpermission: Added CC licenses	81	\@acmBadgeL: Introduced macro	74
\@parfont: Added: acmengage	109	\@acmBadgeR: Introduced macro	74
\@typesetengagemetadata: Introduced macro	101	\@mkttitle@i: Moved badges to top header	91
\if@ACM@engage: Introduced macro	39	Moved up acmcp title	91
\maketitle: acmengage	85	\@mkttitle@iii: Moved badges to top header	92
\setcctype: Added macro	80	\acmBadge: Added macro	75
\setengagemetadata: Introduced macro	84	\acmBadgeL: Redefined macro	74
v1.86		\acmBadgeR: Redefined macro	74
\country: Error if country is empty	92	\if@ACM@badge: Deleted macro	74
standardpagestyle: Special treatment of ACM Engage materials	103	firstpagestyle: Moved badges here	105
v1.87		\set@ACM@acmcpbox: Added logo	88
General: Added 'framed' package for acmcp	42	Added zref position of the bottom	88
No numbering sections for ACMCP	110	v1.91	
\@ACM@color@frame: Introduced macro	77	\acmContributions: Restored the macro	77
\@ACM@copyright@check@cc: Added macro	81	standardpagestyle: Redesigned ACMCP labels	103
\@copyrightpermission: CC licenses now are allowed only for non-acm or ACM engage publications	81	v1.93	
\@mkauthors@i: Special treatment for acmcp	95	General: Added PACMSE journal option	35
\@mkttitle@i: Special treatment for acmcp	91	v2.00	
\acmArticleType: Introduced macro	77	General: Deleted acmPrice	79
\acmCodeDataLink: Added possibility to have several links	77	\@ACM@copyright@check@cc: Moved to warning	81
Introduced macro	77	\@copyrightowner: Changed wording	80
\acmDataLink: Introduced macro	78	\@folio@ht: Obsoleted macro	105
Now this is the same as the code link	78	\@folio@max: Obsoleted macro	105
\if@ACM@acmcp: Introduced macro	39	\@folio@voffset: Obsoleted macro	105
firstpagestyle: Special treatment for acmcp	105	\@folio@wd: Obsoleted macro	105
\maketitle: CC license are allowed for non-acm publications	85	\@folioblob: Obsoleted macro	105
\set@ACM@acmcpbox: Added macro	88	\@sect@kernel: Added macro	41
standardpagestyle: Special treatment of ACMCP	103	\@sect@kernel: Added macro	41
v1.88		\@startsection@kernel: Added macro	40
\@mkttitle@i: Moved down title for acmcp	91	\@xsect@kernel: Added macro	40
v1.89		\acmPrice: Deleted macro	73
General: Added 'zref-savepos' package for acmcp	42	firstpagestyle: Deleted blobs	105
\@ACM@acmcp@delta: Added dimen	42	\maketitle: Added "ACM" for papers	85
\@ACM@badge@skip: Redefined macro	74	Deleted acmPrice	85
		v2.01	
		General: Documentation update: POMACS uses acmsmall	35
		\acmBooktitle: Moved default conference title to conference setting	69
		\acmPrice: Now the macro produces a warning	73
		v2.02	
		\acmConference: Moved here setting the conference title for bibstrip	69

v2.03		postal information anymore	92
General: Added documentation about samples	35	\streetaddress: We now do not collect postal information anymore	92
\acmConference: Made setting bibstrip overriding journal	69	v2.08	
\if@ACM@journal@bibstrip@or@tog: Introduced macro	39	\@parfont: Deleted uppercasing	109
firstpagestyle: Special treatment of tog	105	v2.09	
\maketitle: Special processing for conferences in TOG	85	General: Saved the old definitions (Ulrike's code	40
standardpagestyle: Special treatment of ACM TOG	103	\@ACM@copyright@check@cc: Deleted macro	81
v2.04		\@copyrightpermission: Deleted checking whether CC licenses are allowed	81
General: eISSN is printed, rather than pSSN	69	v2.10	
\@copyrightowner: Changed wording	80	General: Added tocindent for paragraphs and subparagraphs	109
v2.06		v2.11	
\@mkauthorsaddresses: \streetaddress and \postcode now produce warnings	98	\@copyrightpermission: Changed URL for CC licenses	81
\postcode: We now do not collect		\maketitle: Deleted conference date from bibstrip	85

Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.
